

## Town of Camp Verde, AZ – DOT TCP

**Project Location:** Camp Verde, AZ

**Team Members Needed:** Please see description and responsibilities of team members needed (at a minimum):

1. Responsible Engineer in Charge (REIC) - *Four years of professional experience in civil engineering and hold a Professional Engineering license in Arizona*
2. Quality Assurance Manager (QAM) - *Four years of experience*
3. Project Lead

Full descriptions and role/responsibilities are linked and can be found on our website. Outside of those listed above, additional general project team members are welcome.

**Project Background:** Camp Verde, Arizona, is a rural community of about 12,500 people stretched out along the Verde River. The town is bisected by US Highway 17 with State Route 260 running along the west side of the town. The land use is characterized by mostly low density residential development interspersed with agriculture along the river. There is a commercial district stretching along Main Street and Finnie Flat Road. Beyond Main Street and Finnie Flat Road most of the roadway network is local streets and local collectors. The town has a limited ability to raise revenue as they are not able to collect property taxes and they limit the sales tax collected from certain major retail establishments. Because of this lack of funding, there is also a lack of capacity and staff expertise.

In order to access alternate sources of funding, the town needs to have a thorough understanding of its current infrastructure assets including its locally owned roads and bridges. These assets may be leveraged into potential funding sources.

**Description of the Community:** Camp Verde, Arizona, is a historic town in central Arizona's Verde Valley, known for its rich cultural heritage and scenic landscapes. Situated along the Verde River, it offers a mix of small-town charm and outdoor adventure, with attractions like Montezuma Castle National Monument, Fort Verde State Historic Park, and access to nearby hiking, fishing, and camping. Originally a military outpost in the 19th century, the town has deep ties to its frontier history. Today, Camp Verde is a growing community with a focus on agriculture, tourism, and economic development, while maintaining its historic roots and natural beauty.

The Camp Verde area is also home to the Yavapai-Apache Nation. The Nation consists of approximately 2,440 acres of land spread across multiple communities, including areas in and around the Town of Camp Verde. The Town and the Nation have been collaborating on local issues since the town's inception in 1986. Throughout their partnership, the two communities have sought to address key community issues concerning sustainability, transportation, road

infrastructure, land development, water management, and water/wastewater infrastructure. The community is considered underserved, facing disproportionate barriers to transportation accessibility along with many low-income residents. To aid with these transportation issues the Nation operates a network of bus routes in and around the town.

**Project Scope of Work:** CECorps' scope includes taking inventory of various types of roadways in the town. This inventory will include the type of roads (arterial, collectors, local) and the length of the various segments of these roads, The length and width of the bridges owned by the town will also be part of the inventory. The town has various records concerning its roadway network and these will be researched in the initial stages of the project. The final deliverable from the work will be a report summarizing the current roadway system and a table with types and length of road miles. Existing pavement and bridge conditions and a capacity analysis of the roadway system are not a part of this project. This inventory does not include either US Highway 17 or State Route 260.

**Timeline:** The work will begin in Q2 of 2025 and is expected to be completed within 12 months.
